## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2, 5-6, 8, 11-19, 21-22, 26-27, 31-36 and 67-68 are rejected under 35

U.S.C. 103(a) as being unpatentable over Fewkes et al. (US 6,584,263).

Fewkes et al. discloses a composition for coating optical fibers comprising:

an oligomeric component present in amount of about 15 weight percent or less and a monomeric component present in amount of about 75 weight percent or more, wherein monomeric component comprises two or more monomers when composition is substantially devoid of the oligomeric component and the cured product of the composition has a Young modulus of at least about 950 Mpa [column 3, lines 50-57]. Fewkes et al. also discloses the details of compositions of both the oligomeric and monomeric components in the detailed description of the invention section.

Fewkes et al. discloses the instant claimed invention as described above except for specific Young's modulus of the cured product. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the specific Young's modulus for the

cured product, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art.
